FEATURES:

Robust Durability

The drivetrain utilizes AlexRim rear hubs with a reliable ratchet system, known for their strength and longevity, ensuring consistent performance over time.

Optimized Chain Line

The limited gear range on the cassette promotes a relatively straight chain line, which extends chain life by reducing wear and improving efficiency during shifts.

Enhanced Freehub Design

Featuring a steel freehub body, the design increases bearing size and prevents damage, resulting in a stronger interface that enhances overall durability and reliability.

Improved Motor Efficiency

The drivetrain allows for optimal loading conditions, enabling smoother gear transitions and reducing stress on the motor. This leads to better thermal performance and efficient operation, especially during steep climbs.

Optimized Cassette Design

The cassette is machined from a single piece of hardened steel and coated for corrosion protection, it boasts an optimized tooth profile for high-power applications. Its increased thickness significantly enhances its ability to withstand high torque and power, ensuring reliable performance even under extreme conditions.

SPECIFICATIONS:

Cassette	Heavy Duty 5-Speed Cassette
Gearing	15 - 17 - 20 - 24 - 30T
Hub	148 / 150 / 157 * 12mm AlexRims e-Bike Rear Hub
Drivetrain	Microshift Advent Shifter & Derailleur
Chain	KMC e9 Turbo EPT Chain
